Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Milestone 3 : Service Catalog

Service Catalog Item

Purpose:

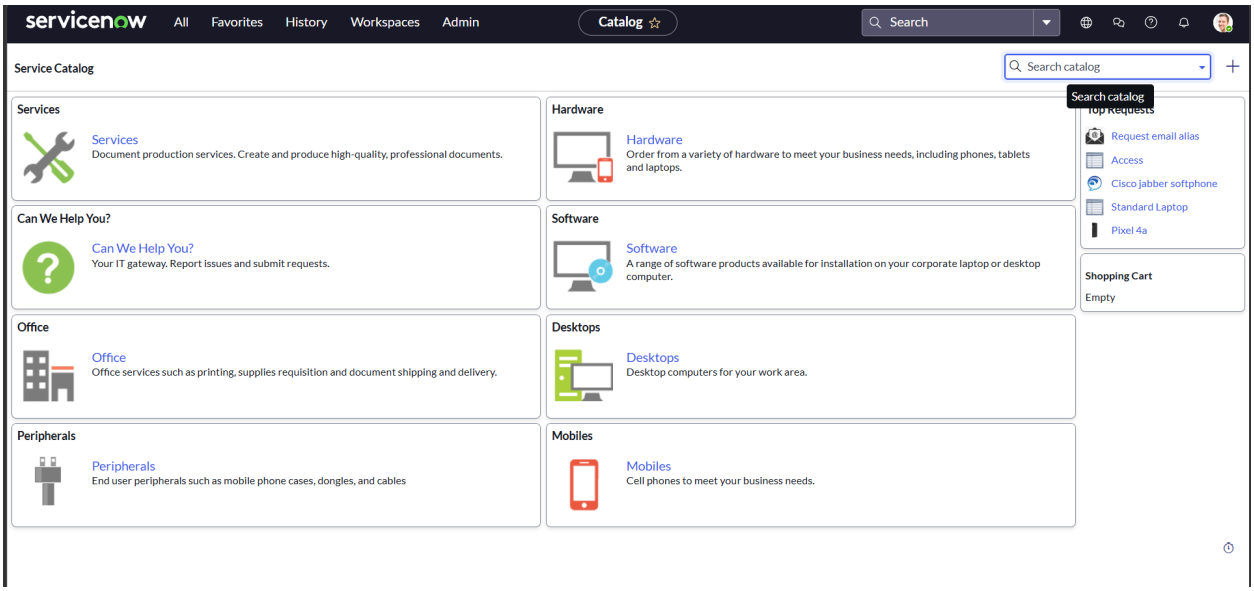

The **[Catalog Item Name]** is available in the **Service Catalog** and allows users to submit **[Request Type]** requests. Once the request is submitted and meets the configured approval conditions, the associated **Flow Designer automation** is triggered to create and route the required fulfillment task.

Process Flow:

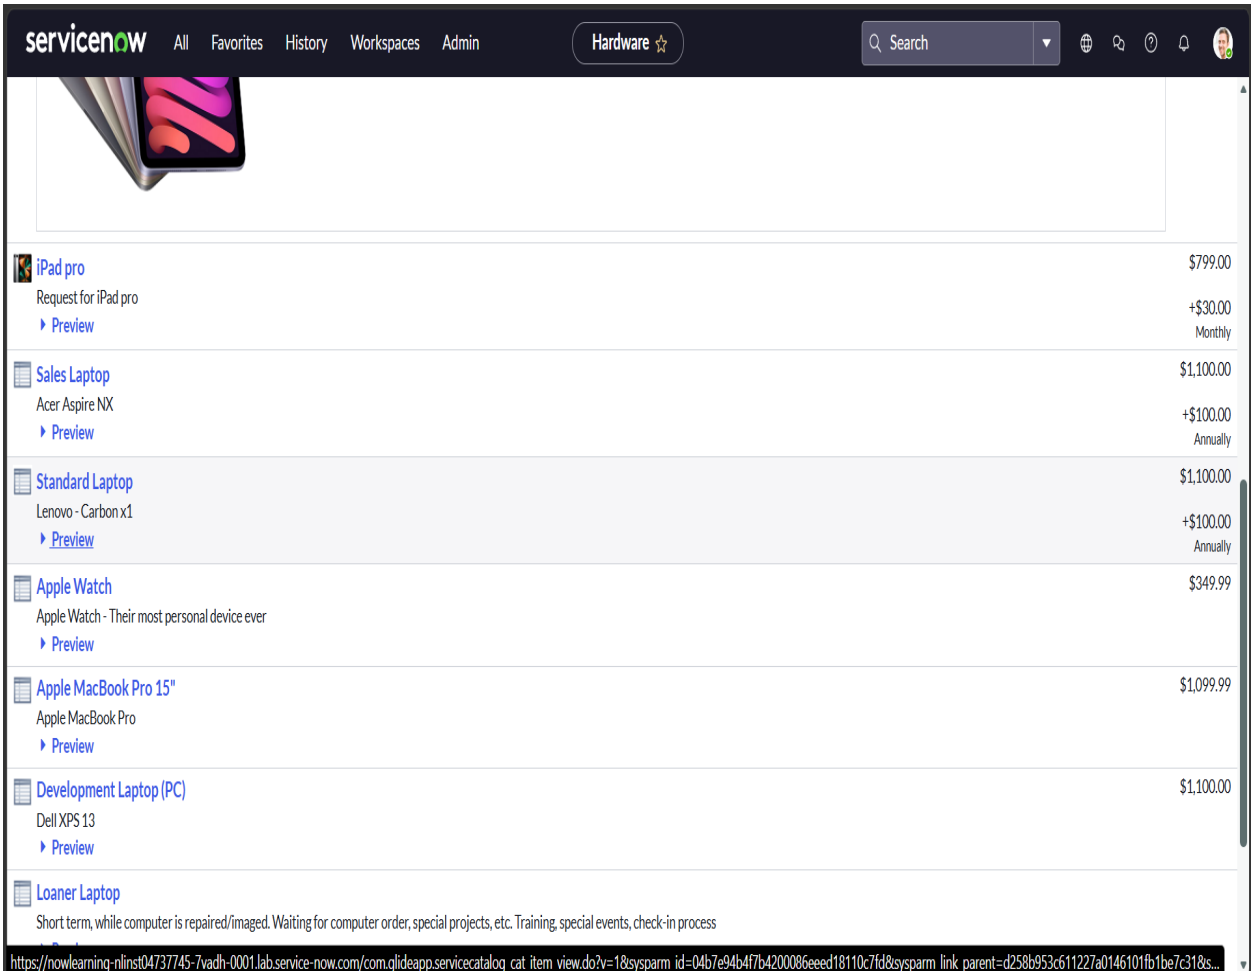

1. The user selects **Catalog Item Name** from the Service Catalog.
2. The user provides the required request details and submits the request.
3. The request goes through the configured **approval process**.
4. Once the request is approved, the associated **Flow Designer flow** is triggered.
5. The flow creates a **Task Type** under the related Requested Item.
6. The task is assigned to the **Assignment Group** for fulfillment.

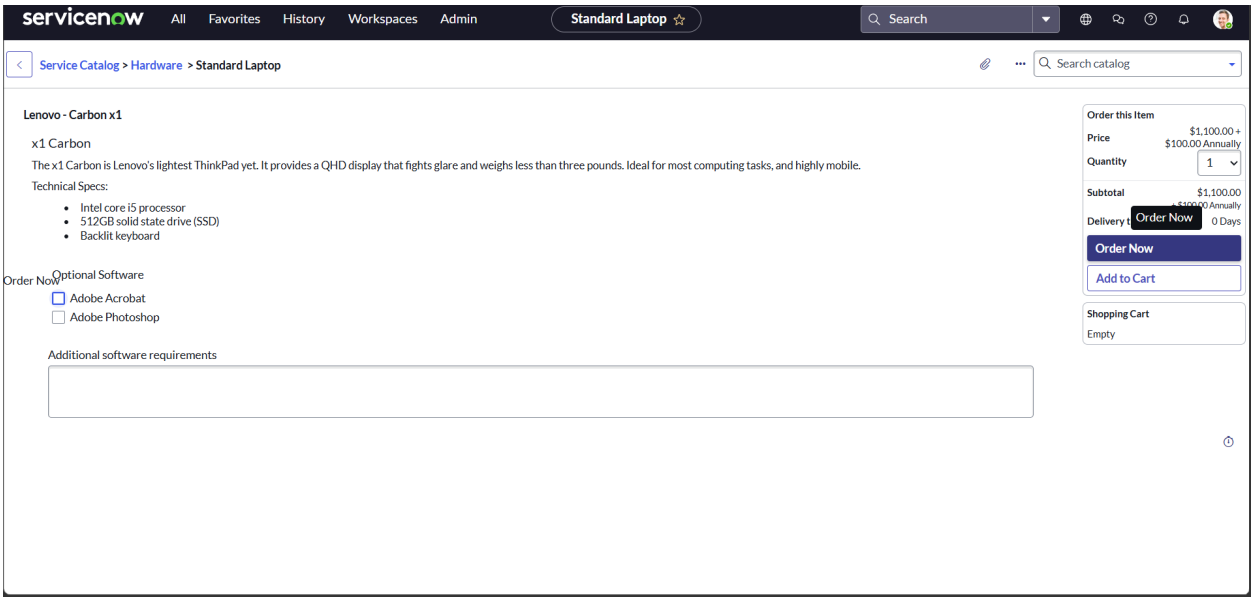

Instructions:

Step 1 :Click on All >> Search for " Service Catalog ".
Step 2 :Click on Service Catalog >> click on Hardware.

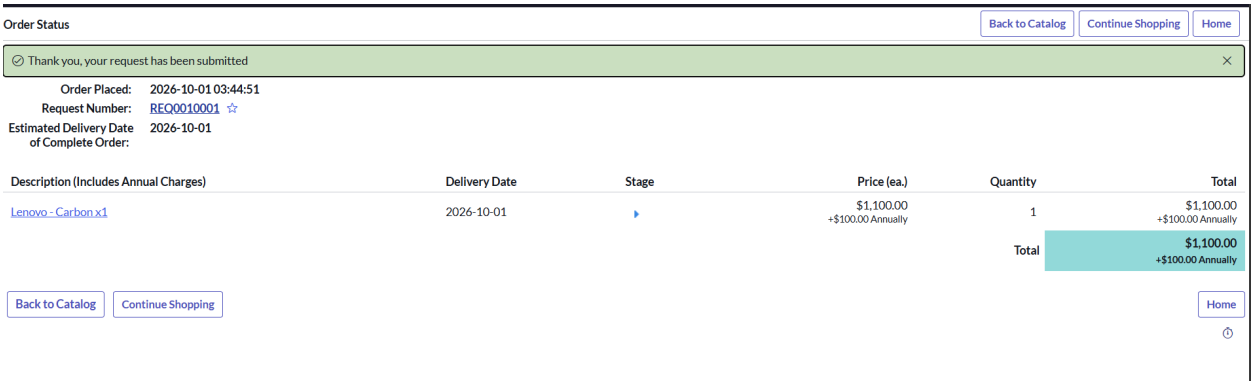

Step 3 :Scroll a bit to find the " Standard Laptop " click on that.

Step 4 :After that click on " Order Now " to place the request.

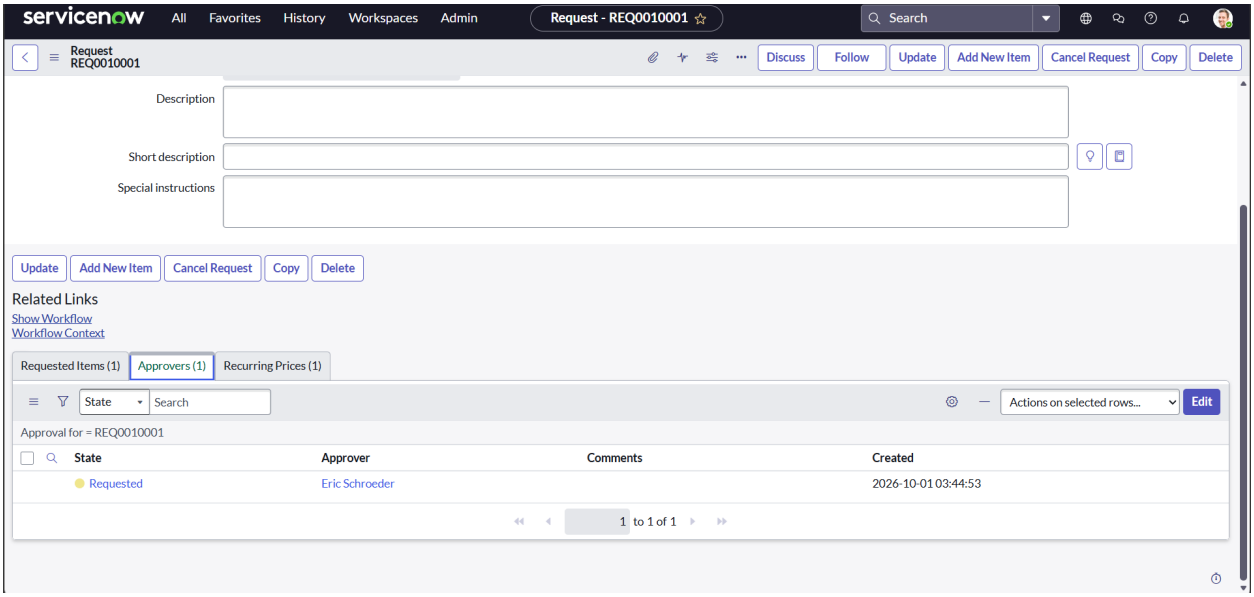

Step 5 :Now we will see the Order status

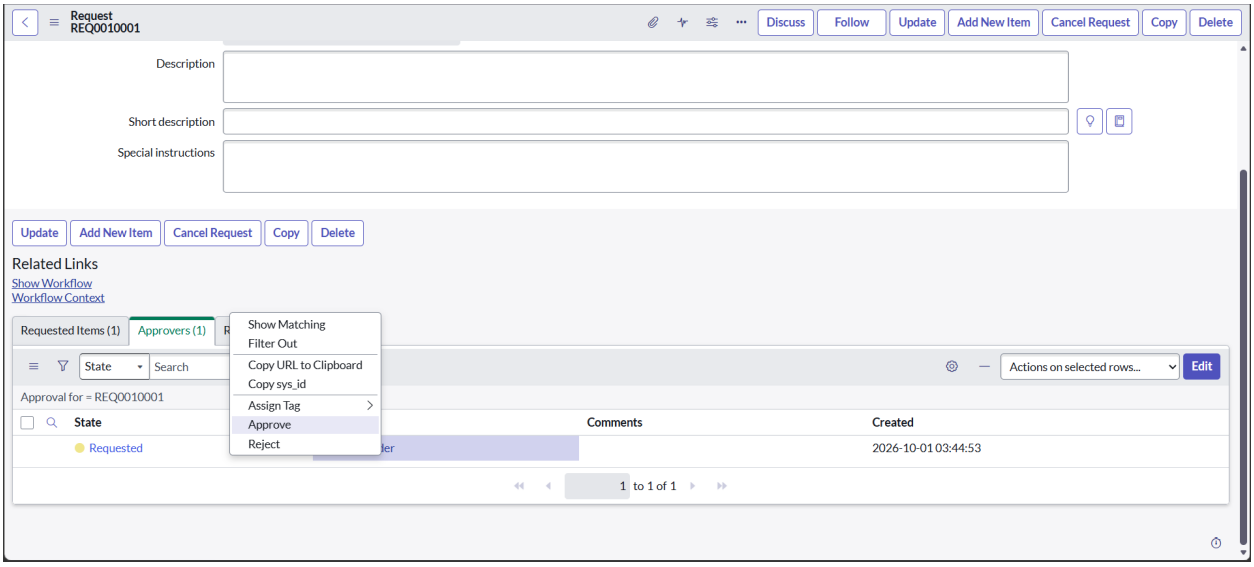

Step 6 :In that click on the Request Number

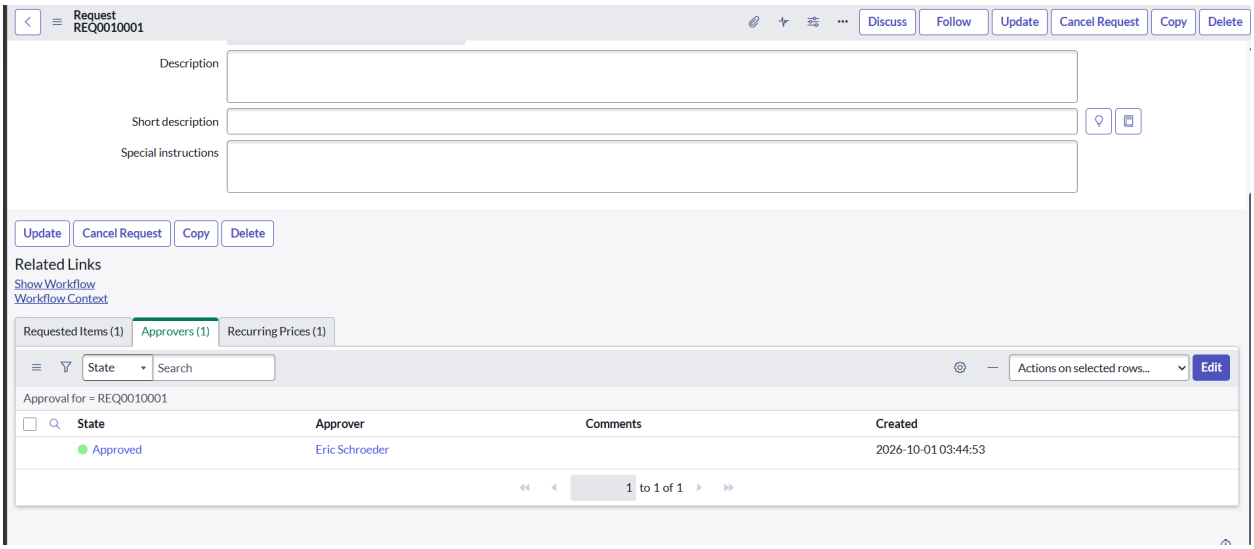

Step 7 :It will open the Requested number record.

Step 8 :Scroll down Click on the Approvers Section.

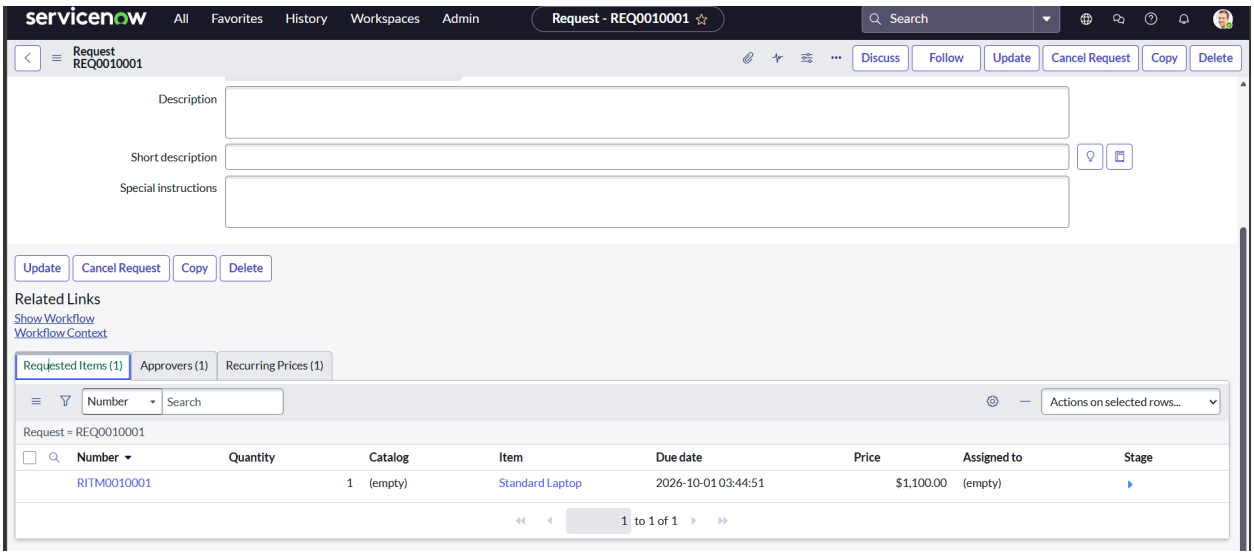

Step 9 :Right Click on the Record to see config in that Click on the Approve. Then

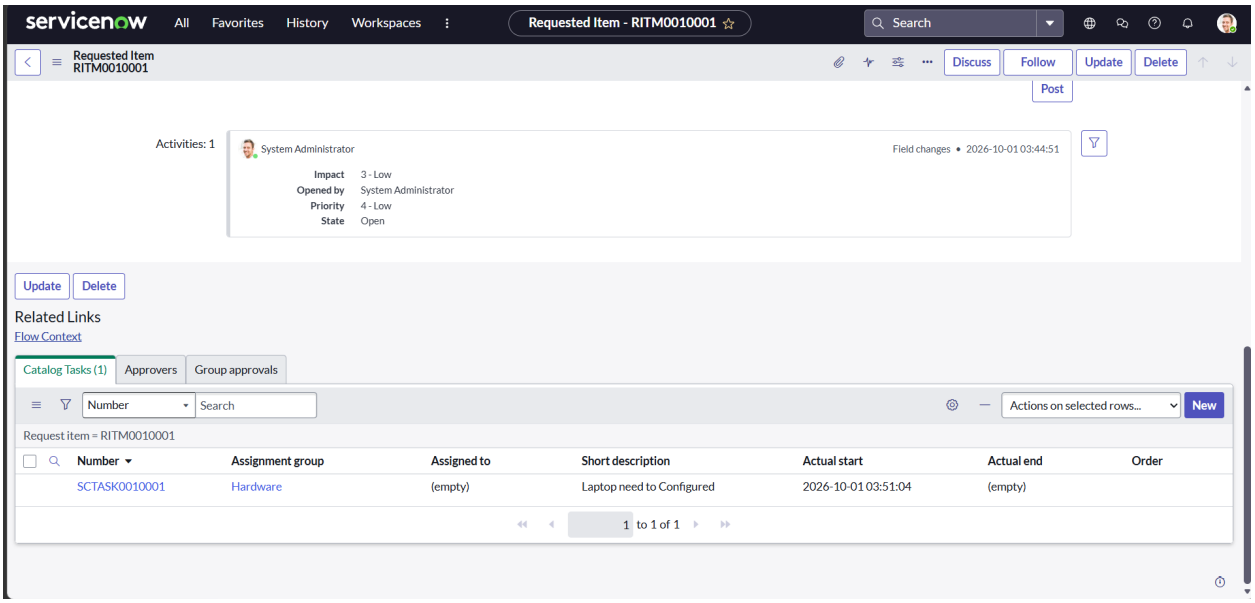

Step 10 :click on the Requested item Section

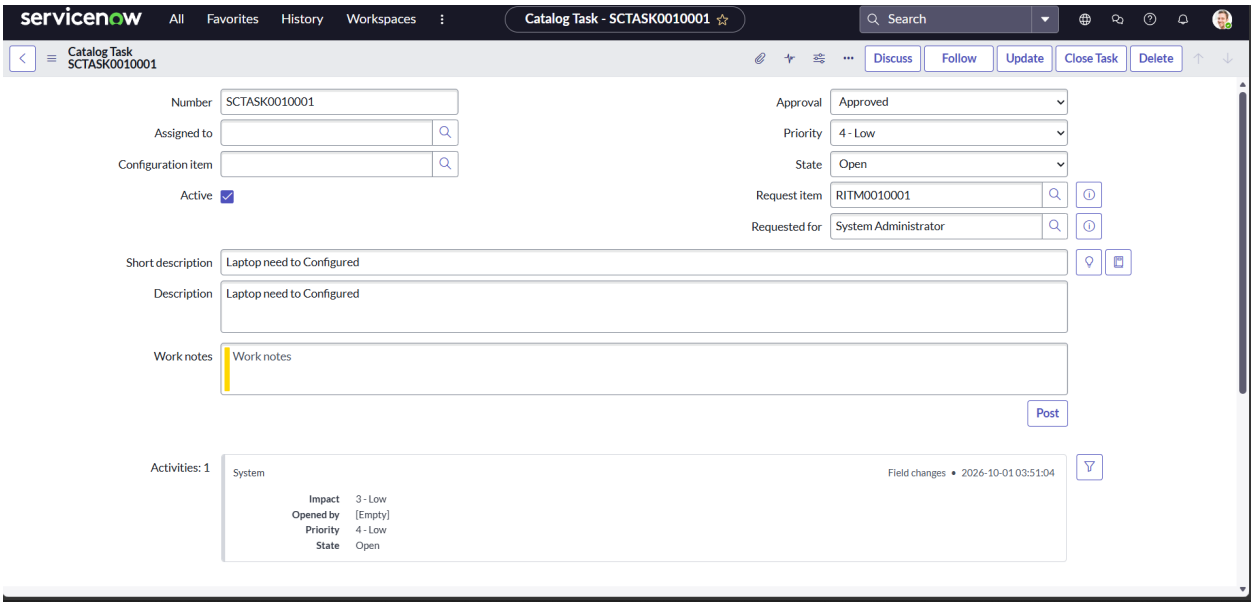

Step 11 :Open that Requested Item record

Step 12 :Scroll down to the “ Catalog tasks ” Section

Step 13: Open the record to see the updated status of the record with Short description and Assigned group.

Expected Outcome:

The catalog item provides a standardized way for users to submit **Request Type** requests while ensuring that approved requests are automatically converted into the required fulfillment tasks and routed to the appropriate team.
