Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Milestone 2 : Flow assignment

Flow Assignment Configuration

Purpose:

The **Flow Assignment** configuration connects the **Service Catalog Item** with the **Flow Designer Flow**. This ensures that the defined automation is triggered when the catalog item is requested and that the required **Task Type** is automatically created and assigned to the appropriate team.

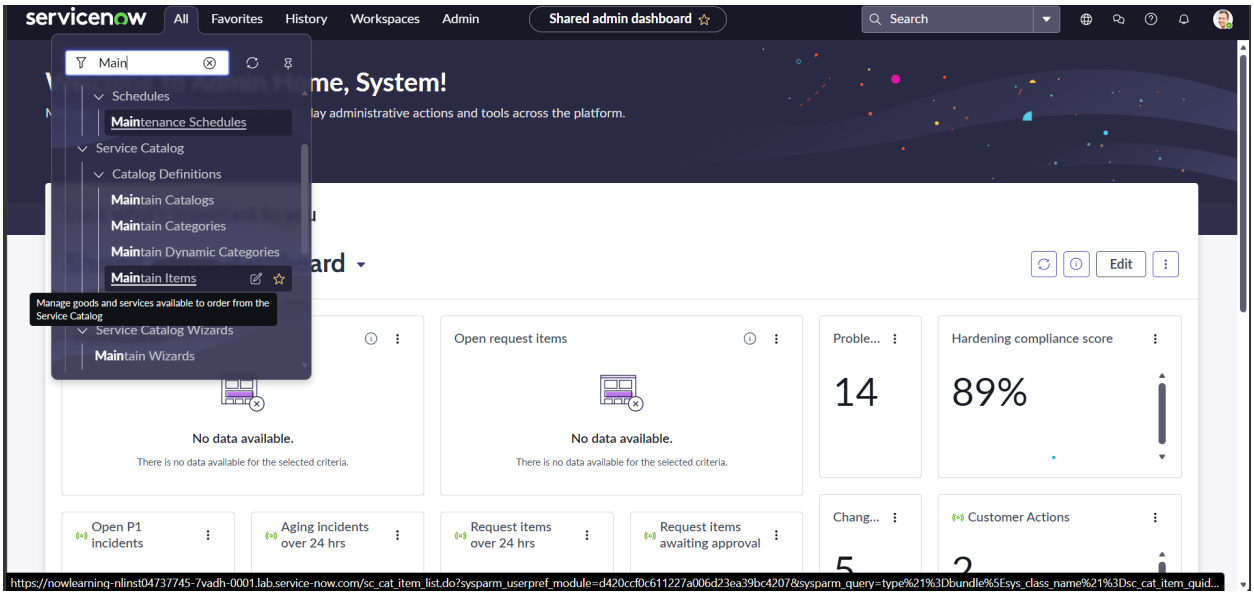

Configuration Description:

The **Service Catalog Item** is mapped to the **Flow Designer Flow** through the Flow Assignment configuration.

When a user submits a request for the configured catalog item, the assigned flow is triggered automatically. The flow performs the required automation, including creating the necessary **Task Type** and assigning it to the **Assignment Group** for further processing.

Instructions:

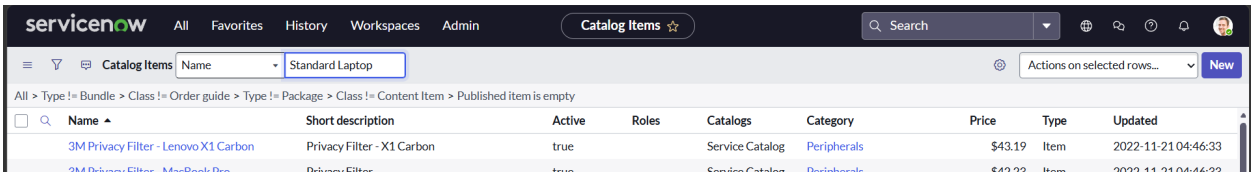

Step 1 :Open ServiceNow.

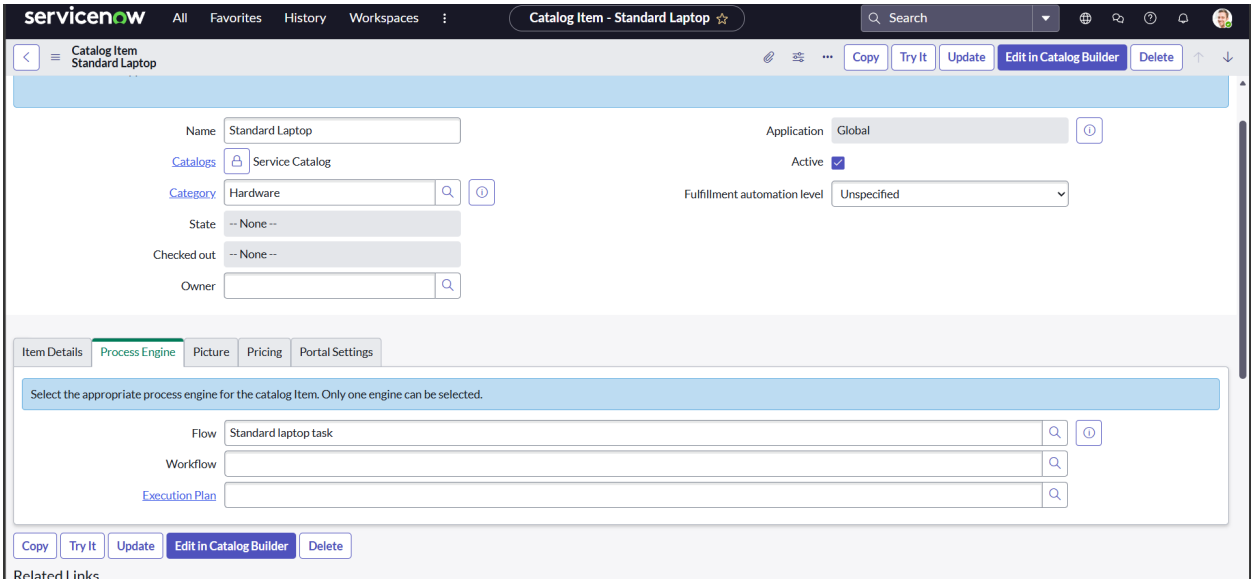

Step 2 :Click on all search for Maintain Items.

Step 3 :Select Maintain Items.

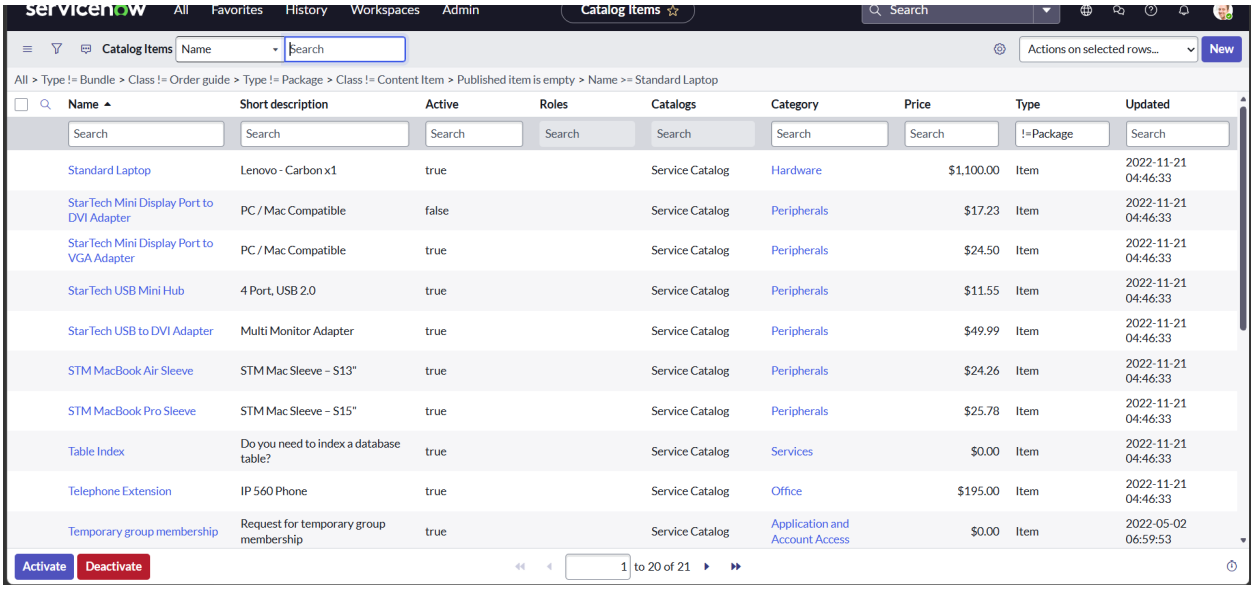

Step 4 :Under the name field search for Standard Laptop Select that record.

Step 5 :Under that record select Process engine

Step 8:Click on the menu to save the record.

Step 6 :Remove the remaining automations and add Flow.

Step 7 :Add the flow that was created with the name " Standard Laptop Task".

Expected Outcome:

The Flow Assignment ensures that:

- The correct flow is triggered for the selected catalog item.
- Required tasks are created automatically.
- Tasks are routed to the appropriate assignment group.
- Manual task creation and assignment are minimized.
- The catalog request follows the defined fulfillment process.
